

# **Web Interaction & Animation – Online**

## **Assignment: JQuery Tutorial**

**Student: Charles Evelyn**

**This assignment was to demonstrate student knowledge of jQuery or javascript plugins or libraries. For this assignment, I choose the jQuery Image Gallery by BlueImp.**

**This plugin allows the developer to create an interactive gallery experience for the site visitor that is both keyboard and mouse responsive. It also provides a play-head so the visitor can activate the slideshow feature within the plugin.**

**A few of the features that I liked were the fact that jQueryUI plugins could be added to enhance or customize the plugin to fit the project's UI. The CSS was or could be "instantiated" with remote files to the blueimp github page and the JS files utilized the Google content delivery network (CDN). The JS file included options for modifying the dimensions of the modal window of the gallery as well as the viewport.**

**The link to my presentation is on YouTube and at this link:**
